Architect Antonio Citterio was inspired by the history of Roman travertine when he set out with [Antonio Citterio Patricia Viel](#) to design this new beachfront condominium in Miami Beach. The 11-story, pagoda-inspired masterpiece known as [Arte Tower](#) uses Roman travertine inside and out. While the material clads ancient Rome's most iconic landmarks, the Italian architect also wanted to take the material and modernize its texture, veining, and rich color, using it alongside other natural materials like bronze and Brazilian ipe. This project, perhaps most notable for its extruded horizontal terraces, is targeting LEED Silver certification.
